High Experience Contracting

What We Do

High Experience specializes in professionally designed, installed and maintained planting and green walls for Offices, Hotels, and Restaurants. We're a B2B company focused on creating spaces where people love to be, great customer experiences, and getting stuff done.

Here's an overview of what we do

- Live, Replica, and Preserved Planting, Green Walls, and Ceilings.
- Rental & Maintenance of plants for offices, hotels and restaurants.
 - Installation and maintenance of living, replica, and moss walls.
- Bespoke planting, including green ceilings, floral, & planting displays.

ABOUT US

High Experience is one of the Leading supply Artificial Plants, Big trees, Green wall, Natural preserved Trees, Plants, and moss wall in Saudi Arabia. Professional in making Artificial Trees, Pot Plants, Artificial flowers, Artificial Vertical Plants Wall, Topiary Hedges and Fiberglass Pots. Specially we do both UV Protection and Fire-retardant Plants. We are sincerely welcome you visit us!

OUR PRODUCTS

- LIVE GREEN WALL
- PRESERVED MOSS WALL
- ARTIFICIAL GREEN WALL
- ARTIFICIAL PLANTS AND TREES
- PRESERVED VERTICAL GARDEN
- PRESERVED PLANTS AND TREES
- POT AND PLANER BOX

OUR PHILOSOPHY

As High Experience we are driven by the passion to create inspiring, uplifting environments that will enhance and enrich everyday life. We seek to engage our customers to be cocreator with us in developing vibrant living and working spaces infused with the spirit of nature. Our aim is to design and manufacture the most beautiful natural and Artificial green wall retailed at reasonable prices and made using only the highest quality materials.

VERTICAL GARDEN

What is Vertical Garden

Whether you call them vertical gardens, green walls, moss walls, live walls, or something else entirely, the concept might be pretty new to you. You might not have heard of vertical gardens before, or know them for that matter, but they are truly a wonder of modern agricultural technology.

Modern is a stretch though, as the main technique behind vertical gardens harkens back to a fairly olden gardening practice known as hydroponics, which is the process of growing plants in nutrient-rich, without any soil. More accepted today, hydroponic gardening has been practiced by humans since the time of [King Nebuchadnezzar](#).

Current advanced vertical gardens grow plants on a vertically suspended panel that does not use soil, but hydroponic principles. These vertical garden panels can be free-standing or attached to a wall, and are a wonderful and space-saving alternative to traditional potted plants.

That said, many vertical gardens can be made of canvas shoe racks, tiny soil-filled pots, ladder boxes, or recycled coffee cans, you name it! The best thing about vertical gardens is their customizability.

Our system is soil-based, which substantially reduces maintenance compared to the common hydroponic vertical garden. Water is stored in the soil for a longer period of time and the soil ensures the longevity of the plants, should there be any system failures

LIVING GREEN WALLS

- Living Green Walls make a dramatic brand statement and show support for green initiatives and the environment.
- Acting as insulation, Living Green Walls reduce heating and cooling costs.
- Help the environment by absorbing carbon dioxide, producing clean oxygen, and reducing noise levels.
- Studies show plants reduce stress and enhance well-being.
- Plants in a workplace are shown to increase employee productivity and can lead to reduction of sick days as much as 15%.

HARMONIOUS BALANCE OF WATER + AIRFLOW + NUTRITION cultivates healthier conditions for Vertical Growth

1 Waterproof Layer

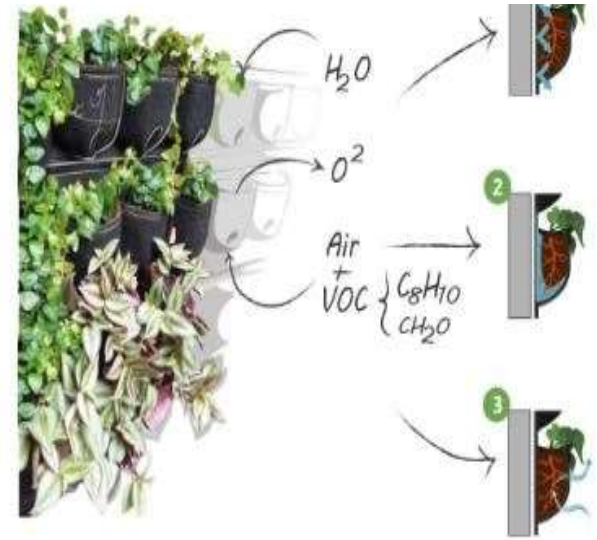

Citygreen™ Living Wall systems waterproof membrane prevents water from penetrating substructures while protecting the plants

2 Root Irrigation Layer

Ensures roots has a connected pathway to propagate and thrive **seamlessly across modules**. This not only fosters the growth of a lush green walls; it sets Citygreen™ Living Walls apart.

3 Breathable layer

Citygreen™ Living Wall systems exterior layer is made from **breathable Fytotextile®** for maximum air flow at low speed wind: providing optimal aeration of the plant roots.

Flexible multilayer modules

The **intermediate layer** will help distribute water and nutrition effectively throughout the living wall keeping stress to the newly placed plants to a minimum in the first stage of planting. The **exterior layer** avoids water retention, through specifically designed fibres allowing air to pass through to the root system of the plants imitating natural growing conditions.

Remote Control Monitoring

Advanced automated system with **remote internet control access for controlling** the moisture, the temperature, ph levels and the conductivity of the system.

The flow and the **automated refilling of the water tanks** can also be controlled remotely.

Integrated Ecosystem

The system was designed to allow the root system to **create a fourth layer** between the exterior and intermediate layers.

This means that the size of the plant won't be affected by the size of the living wall pocket. Therefore the growth of the plants can be managed by the amount of fertilizer and pruning applied.

Recirculated Irrigation System

The Citygreen Living Wall system has the optional feature of **recycling water** to minimise our scarce resources: going to waste.

Fire Resistance

The system is currently tested to European Standards and is **undergoing tests to Australian Standards** to ensure safe building practices.

Designed for Hot climates

The Citygreen Living Wall system has been tested at the University of Seville for **increased water holding capacity** for very hot climates.

LIVE SMART WALL

Why Leave Your Walls Bare?

Create a unique environment that will make an impression on your employees, clients, and visitors with a **SmartWall** from Ambius. The **SmartWall** is a smart, sensible solution for indoor office environments such as lobbies, reception areas, and high traffic locations. It's beautiful, durable, eco-friendly, and easy to customize.

Why A SmartWall?

- Living Green Walls make a dramatic brand statement and show support for green initiatives and the environment.
- Help the environment by absorbing carbon dioxide, producing clean oxygen, and reducing noise levels.
- Studies show plants reduce stress and enhance well-being.
- Plants in a workplace are shown to increase employee productivity and can lead to reduction of sick days.

Ambius SmartWall Services

- Consulting & Design
- Plant Supply
- Installation
- Maintenance and Guarantee

Design Opportunities

The **SmartWall** is designed so plants can be changed to create interesting, new, and seasonal designs.

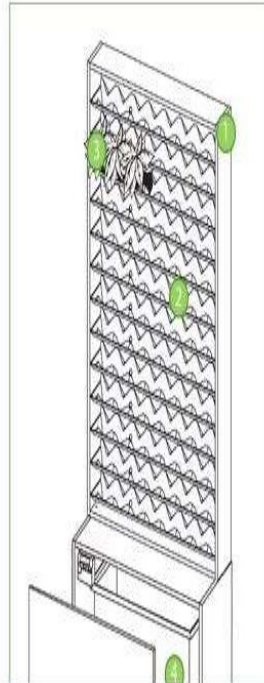

Create a larger wall by placing multiple **SmartWalls** side-by-side

Create a double-sided wall

SmartWall System Components:

- Cabinet Enclosure:** the cabinet is available in a selection of finishes to match your decor.
- Plant Trays:** the trays we use are made of 100% recycled material.
- Foliage Plants:** the plants are chosen to thrive in your specific environment.
- Self-Contained Irrigation System:** the programmable timer on the irrigation system allows us to customize your watering schedule.

PRESERVED MOSS WALL

MOSS wall is the innovative system for indoor vertical gardens with no maintenance needed. The system patented, conceived and distributed by High Experience 2018 allows to make suggestive covering walls with different and totally natural coloring.

MOSSwall, certified for fire resistance and acoustic absorption, is set up for direct wall fixing or through a system of uprights, that enables to create partitions or double-sided self supporting walls. It's antistatic and antibacterial and it forms a hostile environment for insects' spread.

Nowadays, achieving optimal room acoustics is a basic requirement in offices and essential for the well-being of employees. Our moss surfaces are the perfect natural addition here, since they absorb sound from the source of origin without cracking, optimizing any office with this characteristic. From a visual point of view, the natural material also upgrades New Work Spaces and open plan offices. Whether as a green wall stimulating creativity or in the form of a moss logo: Evergreen Premium Moss it provides numerous options for communicating smart corporate branding in rooms in an aesthetically appealing way. This is how customized brand messages create a positive bond for team members as well as visitors, right from the reception area.

ARTIFICIAL GREEN WALL

Indoor Plants Wall Panels, developed specifically for indoor use. The Plants are inherently Fire retardant and suitable for any commercial project where fire retardant is a requirement. Our Fire Retardant Plants raw materials are tested and certified to Fire retardant EN 13501-1:2007+A1:2009.

Outdoor Plant Wall Panels produces the plant walls suitable for use in harsh outdoor environments. Whether it is hot weather over 40°C, low temperature below 15°C, summer, winter, wind, rain, our plant walls always keep their natural color. Outdoor plant walls are made of inherently UV-protected materials tested to UV Exposure ISO 4892-3:2013, ISO 105-A02:1993 Cor 2:2005.

Premium Plants Wall Panels is the ONLY artificial green wall panel on the market with both outdoor UV protection and fire retardant, It is double certified UV Exposure ISO 4892-3:2013, ISO 105-A02:1993 Cor 2:2005 and Fire retardant EN 13501-1:2007+A1:2009.

The premium range of plant walls are made by manually tying the plants to a galvanized steel grid with the necessary fixtures. Each standard size 100x100cm plant wall panel contains a minimum of 15 different species with a total number of over 100 branches of plants. Such a unique design and production method gives it an absolute advantage in the market.

Artificial plant wall discs, which are used to across the plants to round discs. This extraordinarily creative art form has made it increasingly popular. It can also be used both indoors and outdoors.

ARTIFICIAL GREEN WALL SYSTEM

Creates beautiful seamless coverage however the panels are arranged

The thinking process is all taken care of

Planting patterns that interconnect naturally

Easy design templates for users to customise

Varying heights of planting gives a rich tapestry of texture and colour

PANEL A

Overlapping foliage on panels eliminates vertical and horizontal join lines

PANEL B

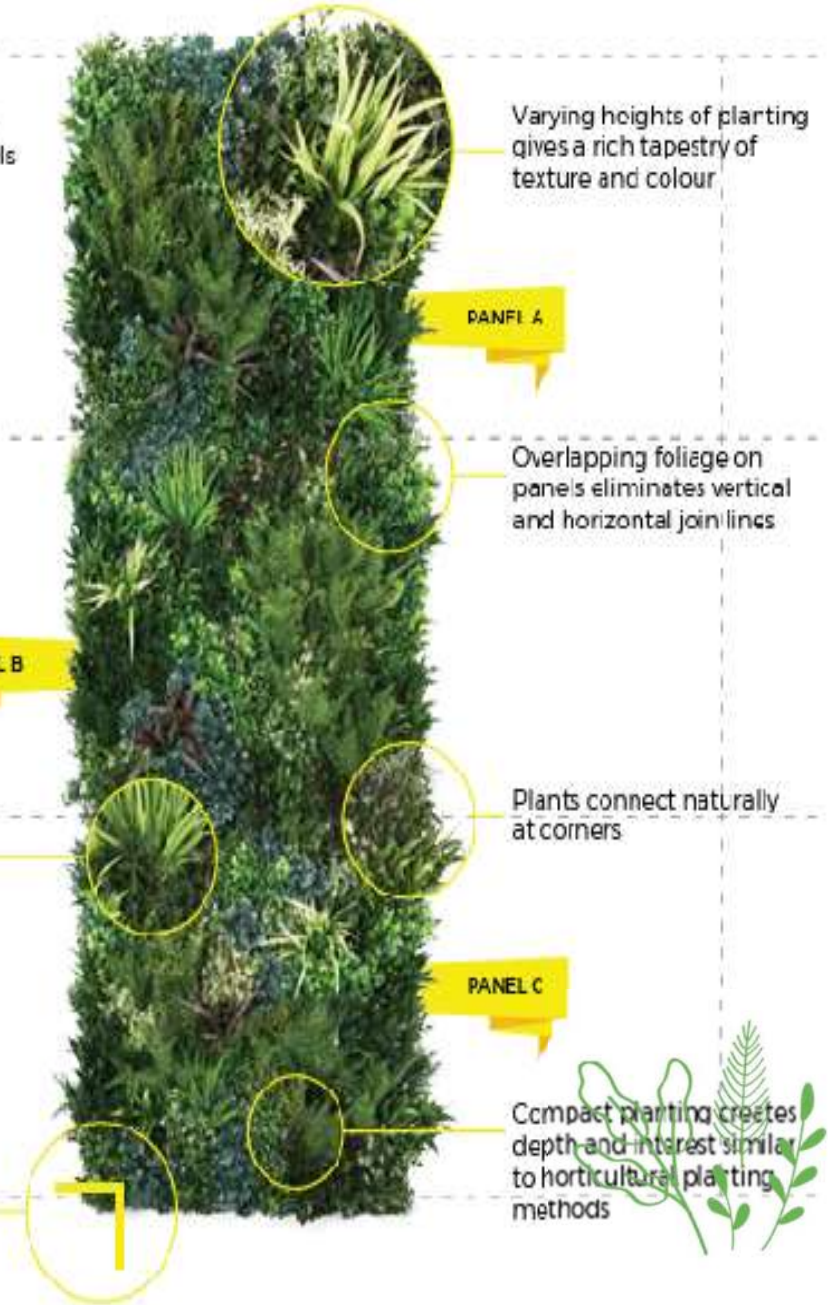

Different tones of green to look like new growth

Plants connect naturally at corners

PANEL C

50mm overhang helps to connect panels

Compact planting creates depth and interest similar to horticulture planting methods

ARTIFICIAL GREEN CEILINGS

For commercial settings, a green ceiling makes the ultimate statement. A particular favorite for restaurant and hotel spaces, a green ceiling brings greenery and interest to any space, allowing you to match the foliage that best fits with the aesthetic of your venue. Suspended overhead using a flexible trellis system and replica plants, green ceilings give the feeling of being enveloped in nature, and are hugely popular with commercial clients wanting to give their customers a unique experience. At Plant Plan, we work with our clients to help them select the appropriate plant types for their space, ensuring an unforgettable impression is made from the minute they walk in.

NATURAL PRESERVE GREEN WALL

NATURE BEST IMITATED

.100% natural lichen preserved using non toxic ingredients. Color shade variations and slight natural lichen aroma are testament to its natural origin. As for any natural products. A slight tone and color variation over time is to be considered normal.

Fireproof certified in accordance with UNI EN 13501 + A1:2013(Class B-s2,d0) and ASTM E-84-17 (Class A)

35% minimum air humidity rate, which is optional for human wellness

Custom design available upon request

GREEN CEILINGS

A modern trend in hospitality environments, green ceilings enable you to introduce a canopy of planting without taking up valuable floor or wall space.

NATURAL PRESERVED PLANTS

PRESERVED NATURAL PLANTS CEILING GREENERY

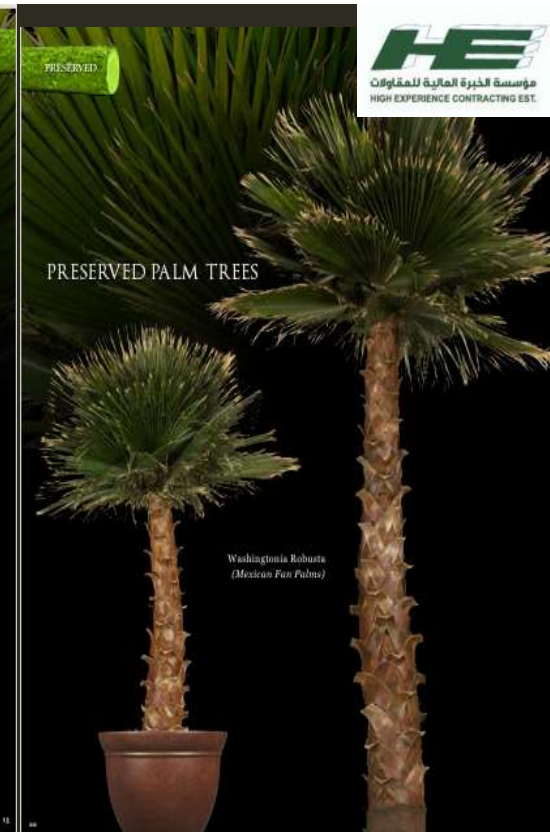

**PRESERVED NATURAL
PLANTS**

NATURAL PRESERVED VERTICAL GREEN WALL

WHY PRESERVED?

One of the biggest benefits for you, after investing in your preserved greenery, is that no maintenance is needed. You won't have to groom, water or replace your plants and trees anymore, you'll just have to enjoy them. On top of that, you can place your preserved plant or tree anywhere, as long as it's inside.

The best of all, the process of preserving plants and trees is ecological, which means you'll get a 100% natural plant or tree. Of which the quality will always be representative.

We understand the importance of longevity and value. That's why each of our preserved trees comes with a remarkable 5-year warranty, ensuring that your investment remains as beautiful as the day it arrived. Our commitment to quality extends from the preservation process to the final craftsmanship, guaranteeing that you receive a product that exceeds your expectations.
